INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
Number of quarters Number of dimes Number of nickels Number of pennies	- Multiply each coin count by its value: - quarters $\times$ 0.25 - dimes $\times$ 0.10 - nickels $\times$ 0.05 - pennies $\times$ 0.01 - Add all the values together to get the total dollar amount. - Format the total to two decimal places. - Add a "\$" sign in front of the formatted value.	A String showing the total amount of money in dollars

IPO CHART

Program name:	[exercise 7]	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
There is no user input in this program. The program automatically checks all integers from 1 to 100.	Loop through numbers 1 to 100. For each number: • Find all factors less than the number. • Add the factors together. • Check if the sum of the factors equals the number. If the sum equals the number → it is a perfect number.	Display all perfect integers from 1 to 100. The output will be: • 6 • 28
